Introduction and Background

Challenges of CBIR

The Semantic Gap

"The semantic gap is the **lack of coincidence** between the information that one can extract from the **visual data** and the **interpretation** that the same data have for a user in a given situation." – Smeulders et al.

The Sensory Gap

"The sensory gap is the gap between the **object in the** world and the information in a (computational) description derived from a **recording of that scene**." – Smeulders et al.
